HASTINGS AIR ENERGY CONTROL, INC.

Hastings is the region’s leading full-service provider of process ventilation systems, vehicle exhaust removal systems, air filters and energy saving ventilation controls. In addition to representing the industry’s leading product lines since 1968, Hastings also offers comprehensive service resources, including: facility assessments, system design and turnkey installation.

WHAT OUR CLIENTS SAY...

“Hastings continually provides us with solutions that exceed our expectations.”

“Their experience, knowledge and creativity have met our ever-changing demands.”

“They have the capabilities and products to engineer solutions that address our specific needs.”

“Hastings recommends systems that save energy, money and the environment.”

“They’re the leader – the best in the business – and it shows. They stand by their clients.”

WHAT WE DO...

DUST COLLECTION & AIR CLEANING
Hastings sells and services a wide range of dust collectors, air cleaners and mist collectors including source capture, ambient, portable, wet collectors, cyclones and bag house systems. Source capture equipment includes fume extraction arms, downdraft tables and dust containment booths.

INTELLIGENT VENTILATION ENERGY CONTROL SYSTEMS
Control systems maximize energy efficiency while minimizing energy use. They are recommended for all ventilation equipment, whether new or existing. Installing a control system immediately reduces operating costs for dust collectors, mist collectors, air cleaners and exhaust systems.

VEHICLE EXHAUST REMOVAL SYSTEMS
Hastings has appropriate exhaust extraction equipment for auto repair shops, off-road equipment and bus and truck maintenance facilities. We are the experts in firehouse and emergency vehicle solutions.

AIR FILTERS & SERVICE
Hastings is your source for filters, preventive maintenance and service for most brands of dust collectors and industrial or commercial air cleaners.
WHAT WE OFFER...

INDUSTRIAL AIR CLEANERS
Packaged, custom engineered, media, electrostatic or wet air cleaners designed to remove smoke, dust, fumes, volatile dust, and/or odor. Applications include: welding, machining, grinding, woodworking, laboratories, school shops and many more. Systems are ambient or source capture and are available with HEPA or adsorption/absorption capabilities. Capacities range from 500 to 500,000 CFM.

DUST COLLECTORS
Packaged or custom-engineered cartridge or fabric media filter collectors for dry particulate applications. Units are available for continuous duty or intermittent use. These can be installed indoors or outdoors depending on the application.

INTELLIGENT VENTILATION ENERGY CONTROLS
Energy controls reduce operating expenses for all industrial ventilation equipment, whether new or existing. These controls immediately reduce operating costs for dust collectors, mist collectors, air cleaners, and exhaust systems, resulting in improved system performance and energy consumption that is reduced by as much as 80%!

BOoths & down draft tables
Packaged or custom engineered containment equipment provides “passive” collection in nonrestrictive environments. Operators and facilities benefit from at-source removal of contaminants that may otherwise migrate throughout a facility and harm remote personnel and equipment.

MIST COLLECTORS
Packaged or custom engineered units to capture mist, smoke, fume and particulate generated during machining processes. Collectors can be direct mount or central systems and will handle water-soluble, synthetic or straight oil coolant applications.

SOURCE CAPTURE EXTRACTION ARMS
Self-supporting articulating arms range from 3” to 10” in diameter and lengths up to 30’. Properly used arms protect operators by removing contaminants before they enter their breathing zone.

VEHICLE EXHAUST REMOVAL SYSTEMS
Source capture systems include hose reels, nozzles, high temperature flex hose, portable, rail-mounted and boom-mounted equipment. Ambient air cleaners compliment the widest variety of vehicle exhaust removal equipment available anywhere.

BLOWERS, FANS, VENTILATORS
The right fan for your application is a must. Hastings knows fans and will recommend the appropriate B/I, airfoil, forward curved, high temperature, material handling, or coated fan to fit your needs...precisely.

ODOR CONTROL
Systems are available for removing or neutralizing odors with activated carbon or other application-specific media.

COMMERCIAL AIR CLEANERS
Ambient “plug-and-play” units, or in-duct equipment that works with HVAC systems, remove allergens, dust, pollen and nuisance odors from lounges, offices, break and waiting rooms.

VACUUM SYSTEMS
Industrial vacuums are available for source capture of grinding dust, welding fumes and other housekeeping needs.

FILTERS / SERVICE / MAINTENANCE / PARTS
We offer filters, parts, maintenance and service for nearly every brand of air cleaning and dust collection equipment. Hastings has been in business since 1969 and has the experience and expertise you can depend on.
VISIT OUR TECHNOLOGY EXPERIENCE CENTER...

The Hastings Technology Experience Center offers visitors a chance to see our equipment in action. Divided into application areas, you can experience firsthand how the most advanced systems can help you protect yourself, your employees and your facilities from the hazards of airborne contaminants.
